The increase of available data and more users with different needs influence the approach regarding data quality. We propose an integration of the Big Data Quality Assessment Model and GIS functionalities.

DATA
Many eyes of different users on more and more available data.

QUALITY
Different “fitness for use” depending on usage and links between data-sets. GIS can help.

ASSESSMENTS
Cooperation between data-providers, data-upgraders and users is needed for reliable assessments. This is only possible if reliable and transparent models are in place.

ACT NOW!
Cooperate and send your contribution to m.jellema@infofolio.nl or m.debakker@has.nl.
